

CITYBAC[®] 240

Reduced to the max

SULO[®]

EMPOWER TO **COLLECT** TOMORROW'S WASTE **TODAY**

We want to help minimize waste to make the future a better place. For a world without waste.

More than 3.5 billion tons of waste. Per day. Worldwide. Together, we are looking past standard answers to solve this complex challenge and stop tomorrow's waste. Every day, we do our best to raise the bar for recycling. That's not just talk, either. We take action. Every day.

Quality

Proofed reliability and beyond standards enable to concentrate on the details to close the circular loop.

Innovation

Creatively developing smart solutions to prevent waste today and tomorrow. Because we can always improve.

Sustainability

Solving complex challenges together – not just for today but with a view to creating a worthwhile future.

FOR A WORLD WORTH LIVING IN

Closed loop recycling is what drives us to live our three core brand values in our day-to-day operations. From design to material, we remain focused on the broader vision of shrinking environmental and climate footprints to zero. As a thought leader in the European waste management industry, we harness all our experience and innovative strength into creating a clean world that is worth living in, for us and future generations.

OPTIMIZE WITH STYLE CITYBAC® DESIGN

SULO's optimized Citybac® 240 is a next-generation 2-wheeled bin produced using state-of-the-art production methods and advanced tools. The new eco design is a compelling response to constantly growing demand for low-impact solutions and better comfort during handling. It's good for the environment. Good for employee/loader and everyday users. Once you try this two-wheeled professional, you will not want to do without it.

ECO FRIENDLY
■■■■■

The more recycled material you have, the less intense the colour of your plastic bin. If you follow this rule when looking for a high-quality bin made from the most recycled content possible, you will generally end up with a grey body for all waste categories. Then, all it takes to easily distinguish between different waste types are coloured lids. A coloured lid ticks two different boxes: It identifies the waste type and minimizes your bin's eco-footprint by maximizing the recycled content.

CLEAN, GREEN PRODUCTION

SULO is known for its corporate culture, which has evolved over the years and combines an uncompromising commitment to quality with the drive to visibly reduce the environmental footprint of all production and service operations. That is why all SULO production sites are ISO 14001-certified. Based on this internationally recognized standard, we motivate our employees and departments to consider and protect the environment and natural biodiversity. Being committed to continuous improvement, we aim to tirelessly minimize environmental impacts and effectively reduce energy consumption and greenhouse gas emissions. Our ISO 50001 energy management system is geared toward continuously improving energy efficiency. Our Langres and Herford production facilities have

been certified since 2016 and 2014, respectively.

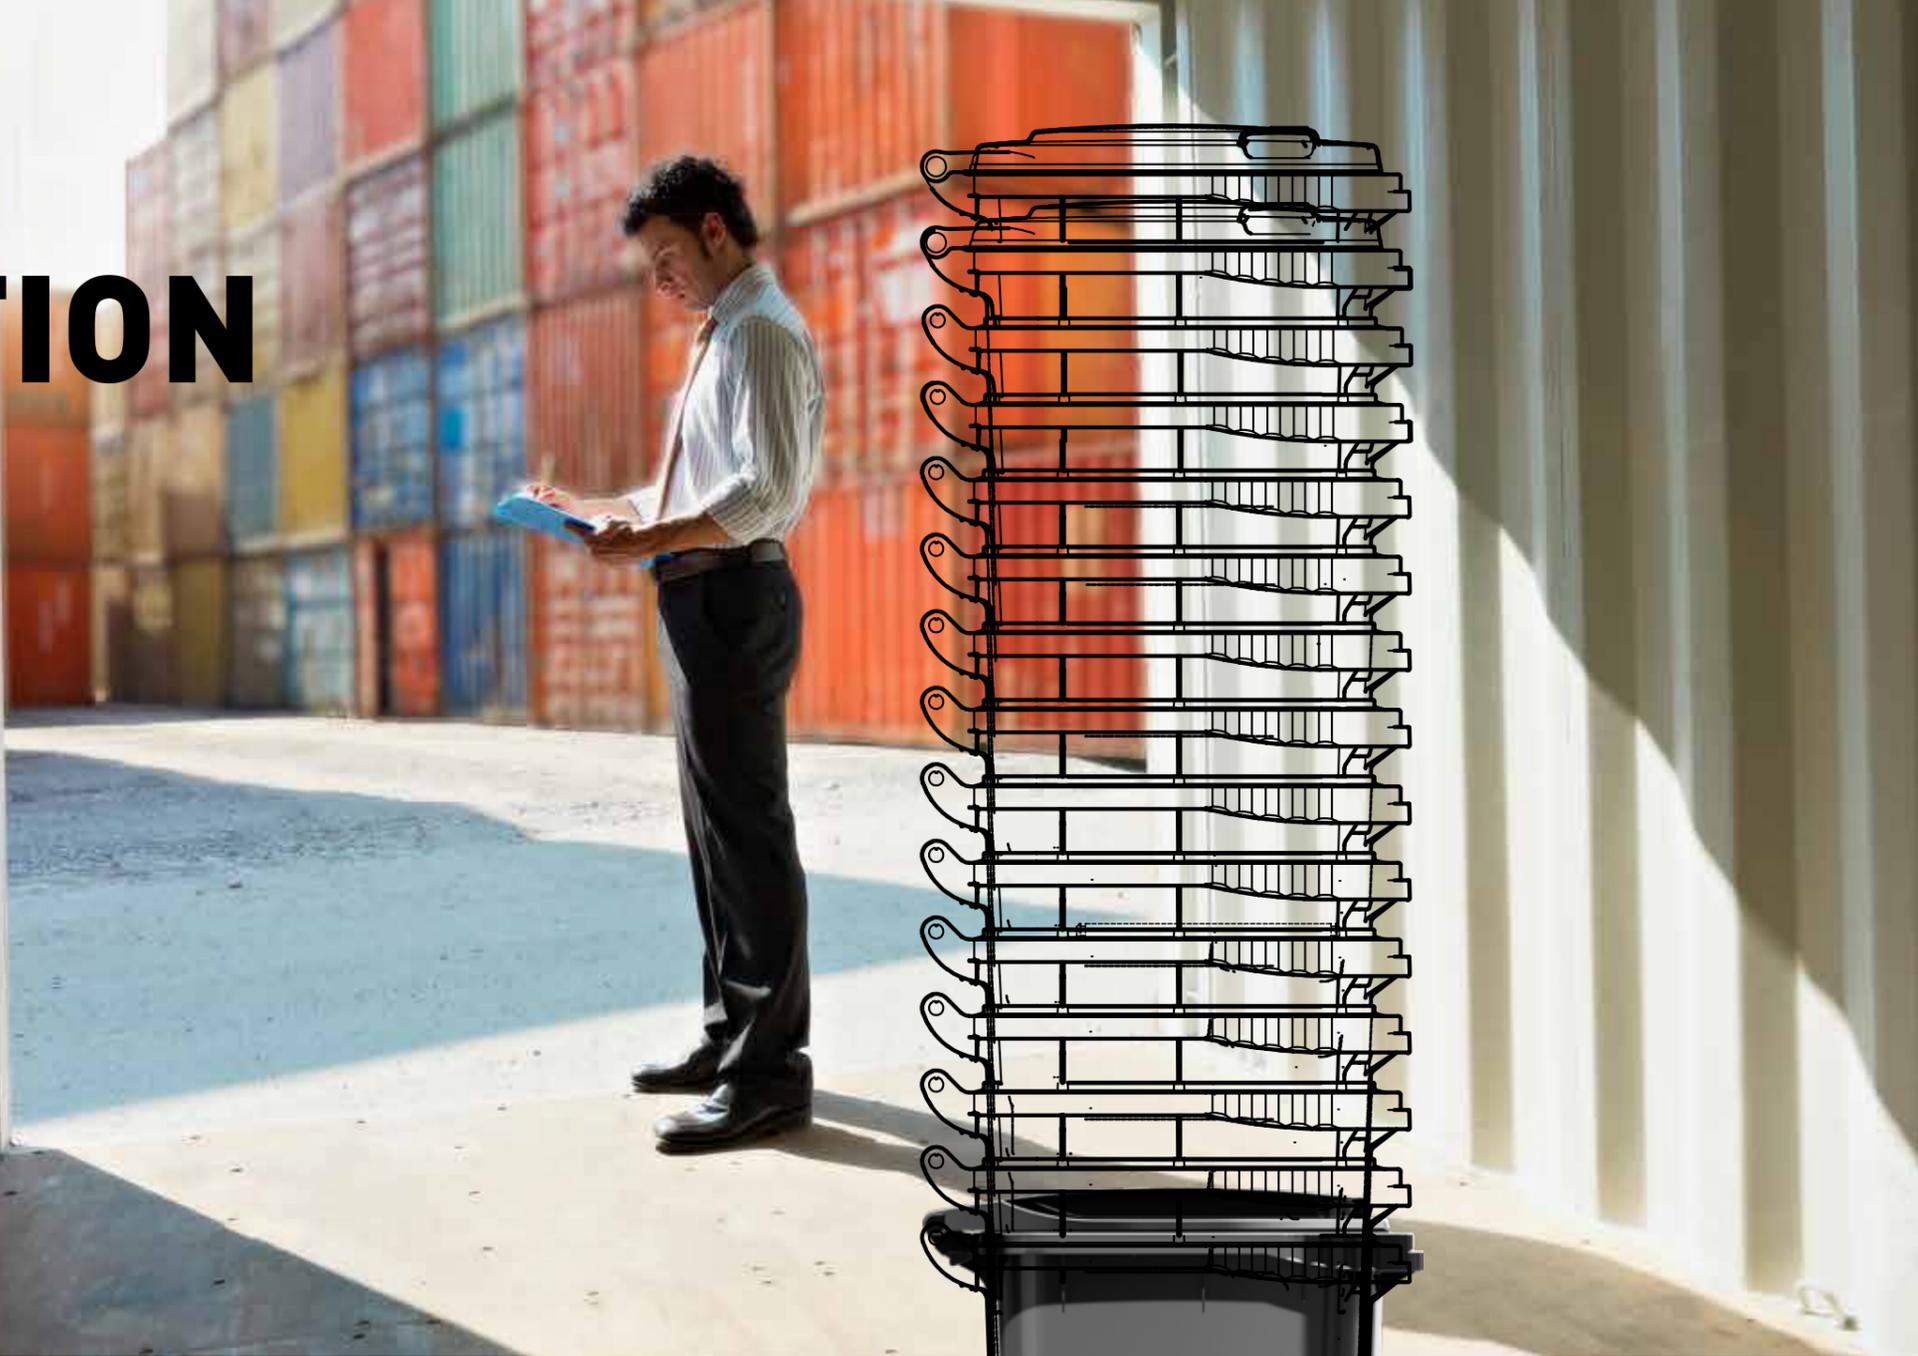

In addition, we encourage all SULO production sites to employ state-of-the-art instrumentation to identify other savings opportunities. At SULO, we strive for sustainability excellence at every phase of our manufacturing and services. The Citybac 240 is manufactured in accordance with EN 840. In addition, it is also provided with the RAL GZ 951/1 quality seal, the highest quality standard for waste and recycling bins. The requirements of the inspections, which are regularly conducted by independent institutes, go far beyond those of EN 840 and guarantee the best quality, durability and safety of the bins.

THE **NEW** BIN GENERATION

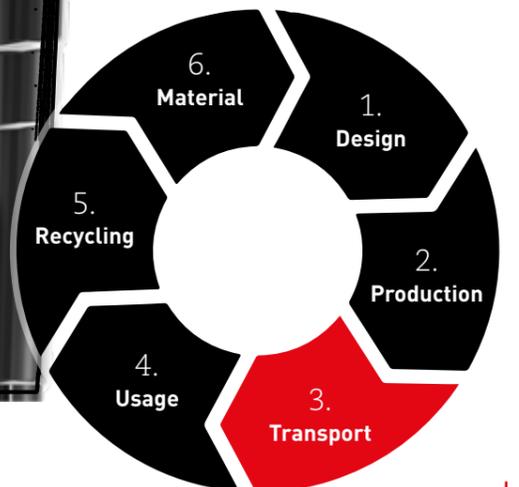

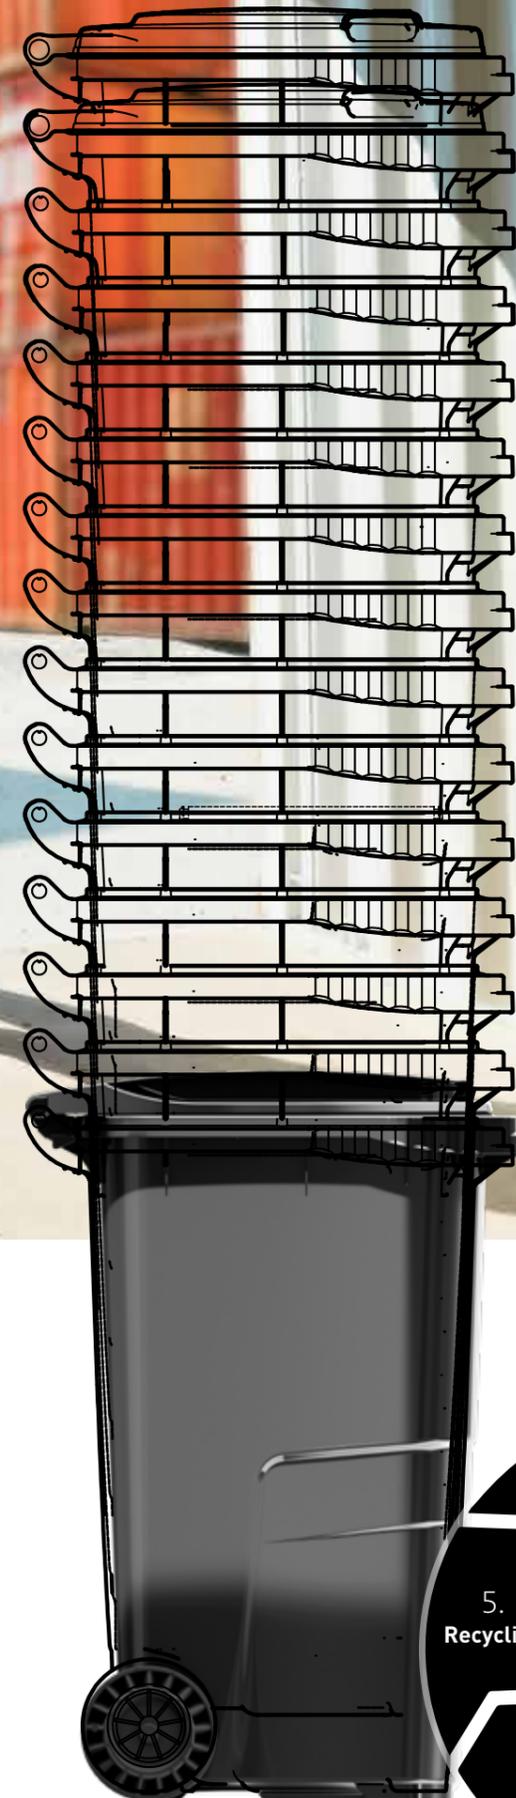

Maximum stacking **TRANSPORT**

SULO has been exporting bins all over the world for 40 years. Since no bin manufacturer in the world has the capacity to store all its bins fully assembled, bins are always stored and shipped in stacked form. The products still take up considerable space, so the main day-to-day challenge is to optimize use of transport space.

OPTIMIZED TRANSPORT

The geometry of the new bin generation was modified to use transport space up to 20 % better than previous products. At the same time, the carrier saves up to one tonne of weight for each transport, which means significantly less fuel consumption per kilometre. SULO has thus fully delivered on its promise to create a sustainable, future-proof product solution. The pioneering design of the Citybac® 240 bin has made it possible to transport more bins per shipment than anyone in the industry has ever managed before – and thus significantly reduce CO² emissions.

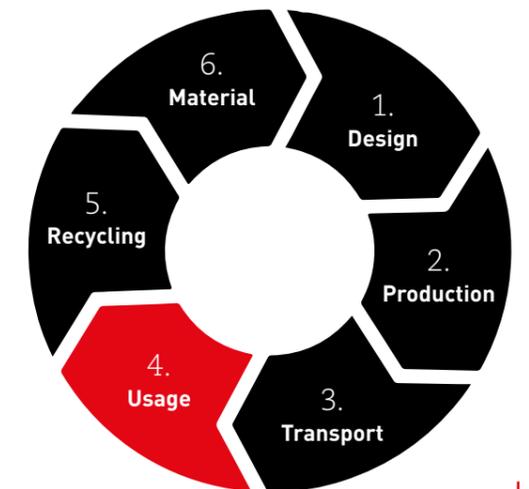

PRIMED FOR COMFORT AND THE ENVIRONMENT

Lighter loads through **WEIGHT REDUCTION**

One employee/loader on a waste collection run empties around 600 bins per day. If up to 3.5 kg is cut from the bin weight, each employee will have to move 2.1 t less a day and 462 t less a year. That translates into up to 25 % less weight for the garbage collectors.

Overall value proposition **USAGE**

Our products are designed to consume as little material and energy as possible while extending their service life. The controlled reduction in bin weight helps reduce workloads for employee/loader and decrease maintenance costs. Logistics considerations are also weighed very carefully to reduce the products' carbon footprint during transport, in large part through better stacking performance. Ecodesign also means preparing for the end of the product's life by making it easier to repair and/or recycle.

OUR PRODUCTS STAY IN THE LOOP

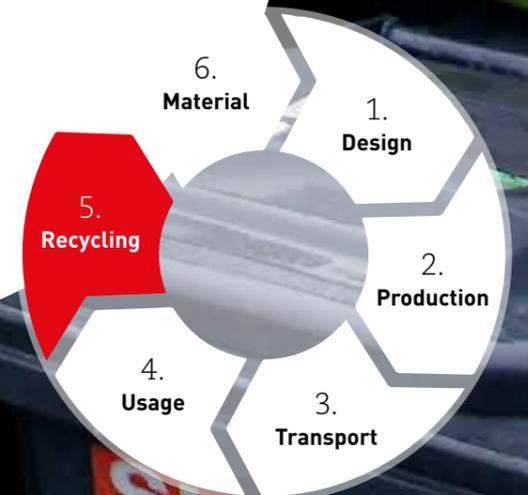

All SULO bins and components are 100 % recyclable. Starting from that basic premise, we have vigorously broadened the concept of sustainable circular economy. Our factories are equipped with recycled-plastic extruders so we can process post-consumer resources, greatly reducing fossil fuel consumption and the resulting CO² emissions.

But we don't stop there. We continue optimizing the circular economy process by employing an optical colour sorting system in order to improve the recycled content of our coloured bins as well. In short, our production processes meet all the criteria to recycle defective or worn-out HDPE bins into new, high-quality and visually appealing products. And so we close the loop.

Fossil fuel consumption **GREATLY REDUCED**

- Lower CO² emissions
- Supports the environmental evolution of cities and municipalities
- Extends product lifecycle

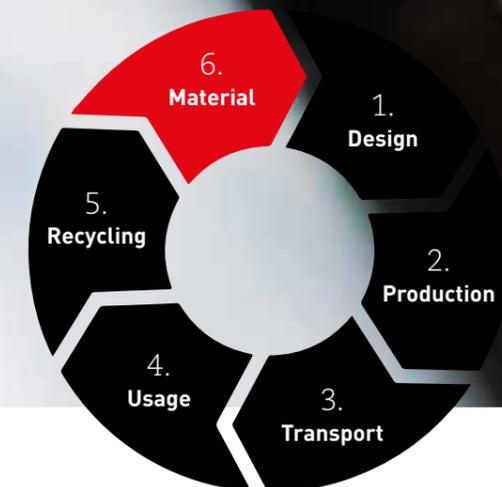

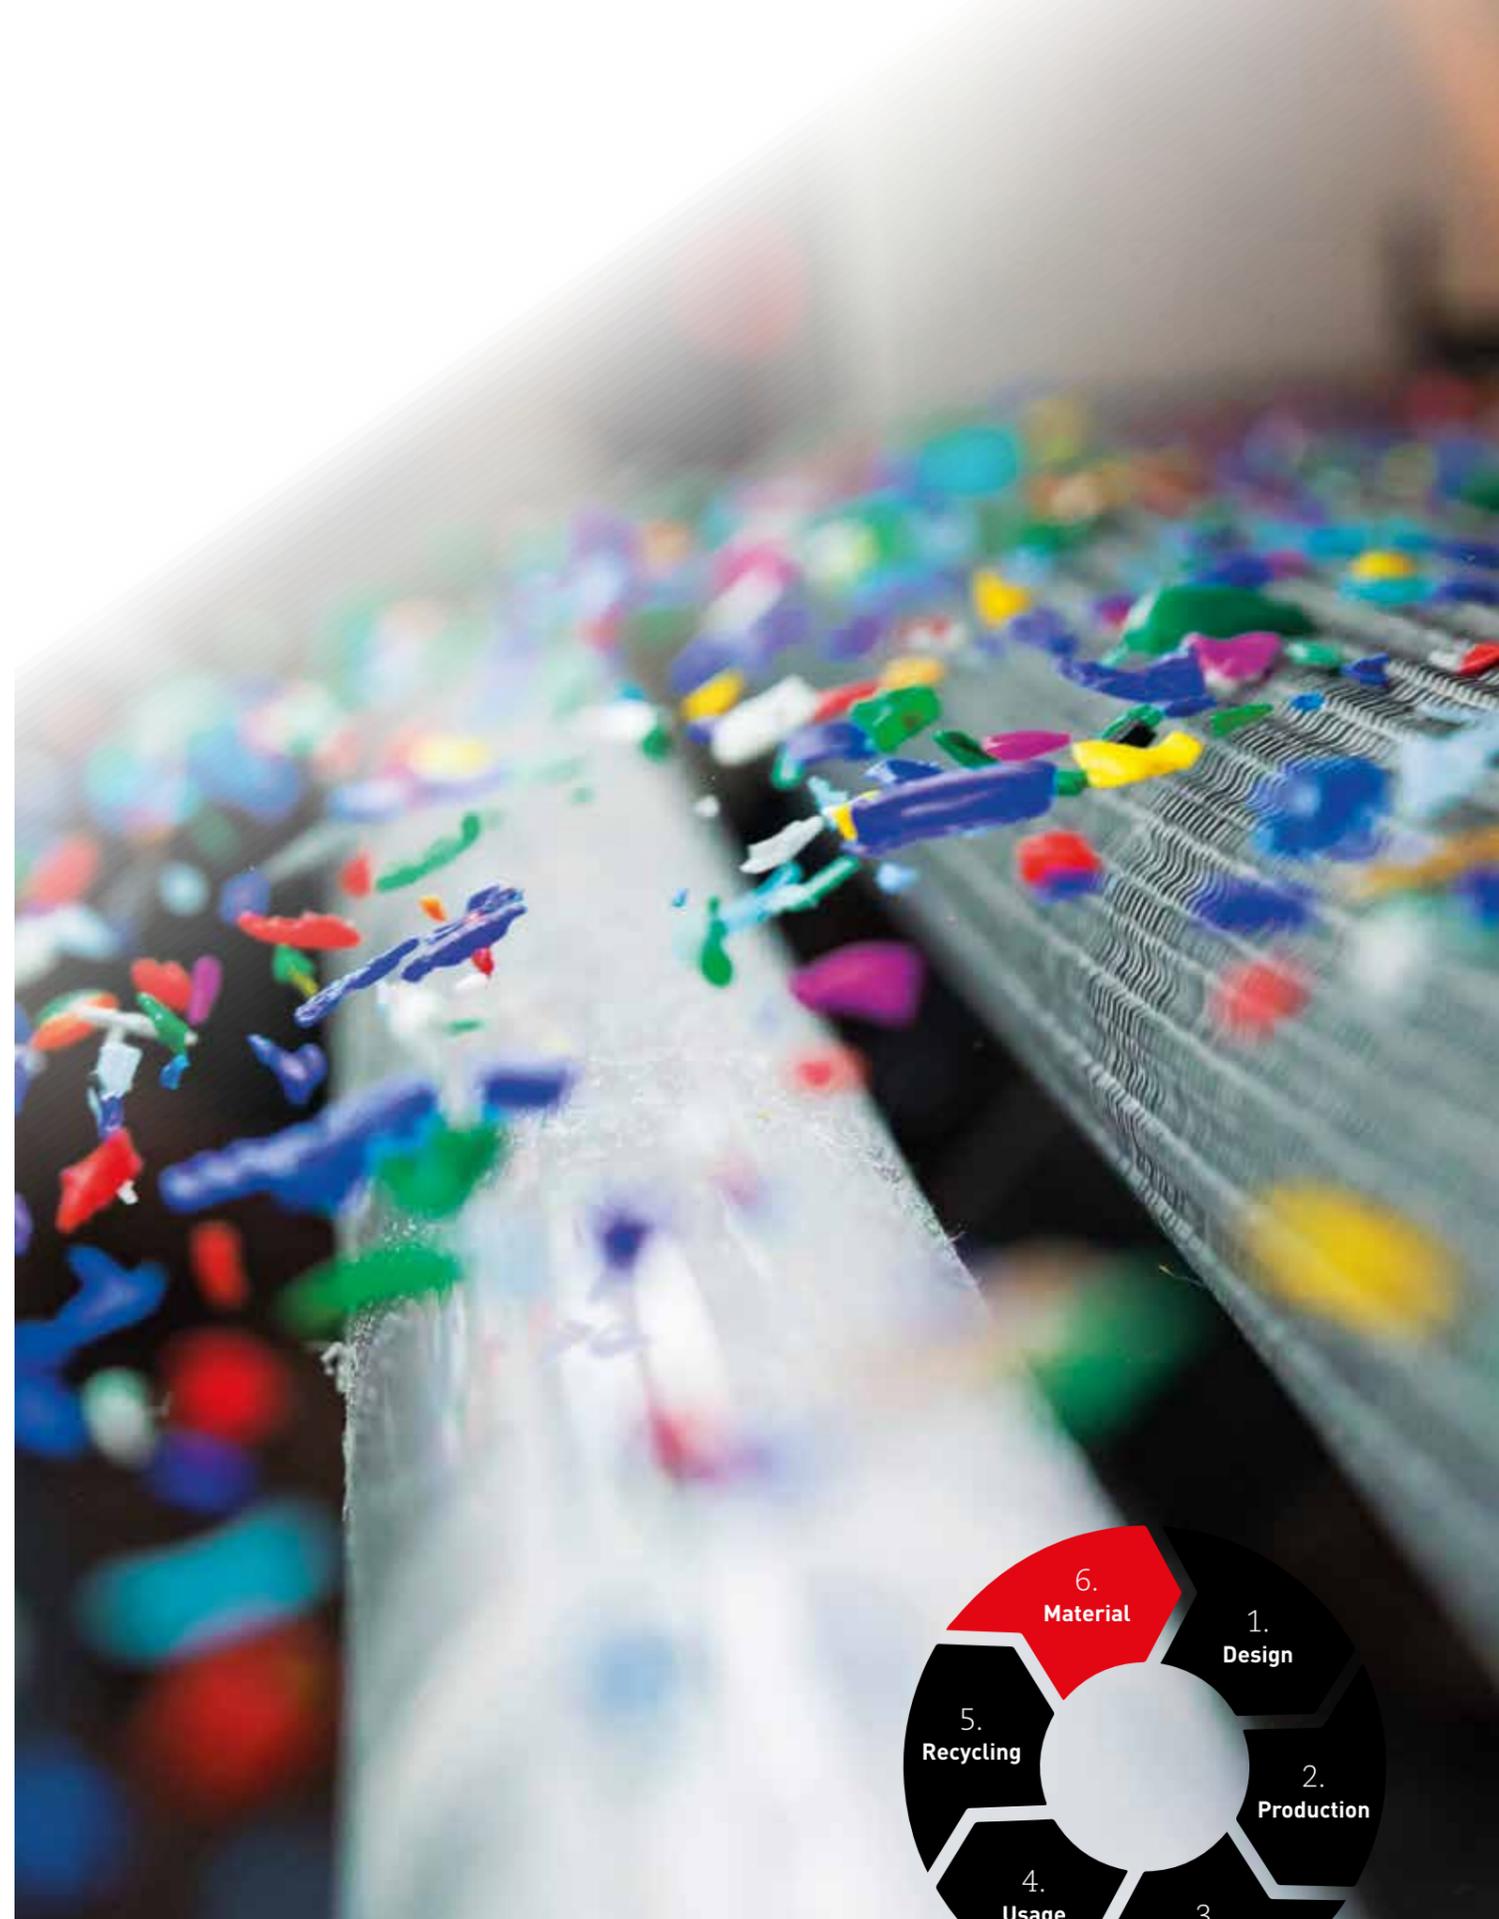

INTELLIGENTLY SORTING RECYCLING

80 % post-consumer recycled content
– 100 % guaranteed SULO quality.

Environment or quality? Ideally, why not pick both? Our RAL-certified Citybacs are made from at least 80 % certified recycled plastic that used to be something other than a bin in their previous lives. We have drawn on all our experience and ingenuity to meet all quality requirements with eco-friendly recycled material. Perfectly designed geometries and state-of-the-art processes deliver the kind of **stability, reliability and durability that you have come to expect from SULO.**
